

Classic Shade/Sun Brand Lawn Mixture

(5 & 25 lb. Bags / Planted @ 4-6 lbs. per 1000 sq. ft.)

This low maintenance blend of grasses will give you the persistence and versatility you need in a low maintenance grooming schedule. Classic has the drought tolerance, shade tolerance, and traffic tolerance you need to perform well under a wide species of planting areas and soil types.

Kentucky Bluegrass(35%)- This species has been selected for color, durability, and economy.

Bluegrass is very durable, bounces back well from drought and heavy traffic. Bluegrass spreads through underground rhizomes to develop a thick, tough, root system, and requires moderate care to maintain its beauty. Approximately 21 days to germination.

Creeping Red Fescue(35%)- This species has been chosen for its hardiness and durability.

Fescue is used extensively in lawn mixtures, for its ability to produce in shaded areas. Fescue spreads by underground runners and makes a good, uniform sod. It does well on most types of soil, maintains a good color, and can withstand wear. Approximately 14 days to germination.

Fine Leaf Perennial Ryegrass(30%)- This species has been selected for emergence, endurance and versatility.

Ryegrass has the ability to produce a tough turf that resists wear and tear, recovers rapidly from damage, and increases the versatility of lawns for recreational purposes. Vigorous root growth penetrates even compacted soil and makes these grasses ideal for overseeding old and thin lawns. Approximately 10 days to germination.

Recommended usage: Lower maintenance, established trees or anywhere that receives less than 50% sun per day. Same, generally, as the Executive brand except seed varieties selected are more maintenance free. Economical.
