

Green Lawn/Development Mixture

(50 lb. Bags / Planted @ 4-6 lbs. per 1000 sq. ft.)

Annual and perennial ryegrass provide rapid establishment, bluegrass and creeping red fescue fill in and make a durable long lasting lawn. This mix is used where rapid stand is required, and is not recommended for dark green premium lawns.

Perennial Ryegrass(40%)- This species has been selected for emergence and versatility.

Perennial Ryegrass has the ability to produce a tough turf that resists wear and tear, recovers rapidly from damage, and increases the versatility of lawns for recreational purposes. Vigorous root growth penetrates even compacted soil and makes these grasses ideal for overseeding old and thin lawns. Approximately 10 days to germination.

Creeping Red Fescue(30%)- This species has been chosen for its hardiness and durability.

Fescue is used extensively in lawn mixtures, for its ability to produce in shaded areas. Fescue spreads by underground runners and makes a good, uniform sod. It does well on most types of soil, maintains a good color, and can withstand wear. Approximately 14 days to germination.

Annual Ryegrass(15%)- This species has been selected for emergence, endurance and versatility.

Annual Ryegrass is a light green, rapid growing, cool season annual. Coarse leaf texture, short life and clumping growth make it a poor choice for turf grass. It is best suited for highly erodible ground cover on poor or compacted soils.

Kentucky Bluegrass(15%)- This species has been selected for color, durability, and economy.

Bluegrass is very durable, bounces back well from drought and heavy traffic. Bluegrass spreads through underground rhizomes to develop a thick, tough, root system, and requires moderate care to maintain its beauty. Approximately 21 days to germination.

Recommended usage: This is essentially the lawn version of a cover crop. Establishes quickly, great for new lawns, especially with slope. If a customer uses this they should plan to reseed within a two year window as the Ryegrasses die out and the stand begins to thin.
